

KYOWA USA ADVANCED MOTOR ROLLERS FOR THE MATERIAL HANDLING INDUSTRY

Overview

Kyowa, a leading manufacturer of 24V motor-driven rollers, supports the material handling industry with creative solutions and precision products. An active participant in the North American motor-driven roller market since 1992, Kyowa was a major manufacturer of DC brushless motor-driven rollers, which have become an industry standard.

Headquartered in Kasai City, Japan, Kyowa products have a rich heritage in the processing of gears and shafts for automobiles and motorcycles. The company started as a machining subcontractor for Kawasaki Aircraft Corp., now known as Kawasaki Heavy Industries, Ltd., Kyowa is dedicated to creating products that provide significant benefits to the customer.

Now incorporated in the United States, Kyowa USA will support all North American market demand for motor-driven rollers. Kyowa expertise and experience is now more accessible to customers and growing relationships will help drive future research and development initiatives. Lead times will be shortened to approximately one to two weeks for standard product orders.

Since 1992, Kyowa has accumulated an installed base of approximately 900,000 rollers. The USPS and Dell Computer have both been recognized as leaders in utilization of motor-driven roller technology and both are long-time users of the Kyowa product.

Products

Kyowa's durable and reliable product range is well-known in the global material handling industry. The company is now launching three new products under the Pulse™ Roller name in conjunction with Insight Automation. A 28-watt motor is planned to address industry standard utility needs. A 35-watt roller will be available for high-power applications that run heavier loads. A 50-watt roller will offer added capabilities for high-speed applications.

Strategic partnerships

Kyowa has been providing outstanding products to the North American market for more than 15 years through a variety of distributor relationships. Now with the introduction of the Pulse Rollers, Kyowa will be more directly involved with customers via an exclusive relationship with Insight Automation. Manufacturing, assembly and application-specific testing will be handled directly by Kyowa, while Insight Automation will handle sales and application support.
