

ConveyLinx®: The Networked Conveyor System For People Who Hate Networks

With ConveyLinx® you gain all the benefits of a networked conveyor system without all the hassles. This control system for Motorized Drive Rollers (MDR) features simple push-button operation. It automatically operates multiple zones of linear conveyor right out of the box, without any special tools or software.

CONVEYLINX BENEFITS:

With the push of a button, the ConveyLinx Ethernet Roller Speed Control (ERSC) modules recognize the type of sensors you're using, then automatically detect the direction of the package flow. With this network solution, you always know the status of every part of your system and the location of every package on your conveyor. The information you gather over the network also helps you keep track of wear and tear on your equipment for predictive maintenance.

Advantages of ConveyLinx Plug & Play Control:

- Push-button configuration for network control
- Safe, low-voltage MDR system
- Simple zero-pressure accumulation (ZPA) control
- Automatic recognition of motor direction, sensor type
- Controls any manufacturer's motor
- Works with any Ethernet-capable PLC
- E-stop functionality

SIMPLE INSTALLATION:

ConveyLinx is also simple to install with convenient symmetrical wiring. Two-zone control also reduces wiring hassles. Modules for each conveyor section of an integrated system connect with standard Ethernet cabling. If your conveyor system is already in alignment with ConveyLinx default settings, you just press one button to install, then go. It's that easy!

RECONFIGURE WITH EASYROLL SOFTWARE

If you need to change the module's default settings, it can be quickly accomplished using separate ConveyLinx EasyRoll software. Simply plug a PC into the network, then use the EasyRoll configuration tool to alter motor type, speed and other factors.
